Private Email / Hosting Server - Speed, Security, Stability And Fully Managed Support

Private Hostname - host.yourdomainname.com

We setup your host name as host.yourdomainname.com and configure reverse pointers for the server I.P. to exclusively match your hostname. This ensures that your genuine emails are NEVER Blacklisted or Blocked by RBL lists.

Fast and quality support around the clock

Need any assistance, any time of the day & you can expect us to be there for you.

cPanel / WHM License Included

The cPanel & WHM software package is an easy-to-use graphical control panel that gives website owners the ability to quickly and easily manage their emails and websites.

Custom Built, Enterprise-grade hardware

All our Managed VPS servers are enterprise-grade and use only the best components available, to ensure maximum performance and stability.

What is a PRIVATE SERVER?

A PRIVATE SERVER is created by partitioning a dedicated server into multiple VIRTUAL servers such that each PARTITIONED SERVER can run its own full-fledged operating system and can be independently rebooted. Each PARTITIONED SERVER is called a PRIVATE SERVER.

You have full control of your PRIVATE SERVER and get dedicated resources such as RAM, Disk Space, Bandwidth, and CPU for that PRIVATE SERVER. Just like you, other users get a PRIVATE SERVER on the same dedicated server; however they do not interfere with one another and work in complete isolation.

The latest cPanel/WHM control panel is included FREE with every PRIVATE SERVER. cPanel/WHM allows you to configure multiple domains, set up email accounts, create databases, park domains and much more!

Why choose a PRIVATE SERVER instead of Shared Hosting?

More and more businesses are now moving to PRIVATE SERVER HOSTING for more reasons than just speed and flexibility.

Shared hosting is relatively insecure and emails and databases remain at risk when hosted under a shared hosting environment. The PRIVATE SERVER nearly eliminates this risk by ensuring that no other domains/websites/applications are hosted within the clients PRIVATE SERVER.

A PRIVATE SERVER is scalable with zero downtime. You can choose a minimal allocation PRIVATE SERVER to run a simple e-mail server or a high-end PRIVATE SERVER to run a webserver with enough resources to support extensive database applications and heavy traffic.

Many of our clients chose a PRIVATE SERVER to host their applications or their email server because of practical problems faced with shared hosting; some are shared below:

A) When a single employee entered an incorrect password multiple times, the entire IP of the clients network used to be blocked by the firewall and all email communication used to stop. On the PRIVATE SERVER the IP addresses of the clients network were whitelisted and even if an employee enters incorrect passwords by mistake, access to the clients network is not blocked and email communication is not disrupted.

B) Many clients needed to send a larger volume of emails but because Shared hosting servers have a limit on the number of emails that can be sent, this limit was exceeded time and again, disrupting email communications. Moving to a PRIVATE SERVER ensured that larger volume mails are sent as a PRIVATE SERVER does not have the restrictions imposed by shared hosting.

C) Applications of some clients needed special configuration and settings which were not possible under a

All Our Private Email & Hosting Plans Come With The Following;
